DATA MODELLING AND FORM DESIGN FOR EVENT REGISTRATION IN ZOHOCREATOR

SUPRIYA 241401111

BTECH CSBS

AIM:

To design and build a functional "Event Registration Form" application in Zoho Creator that demonstrates the correct usage of all thirteen Basic Fields available in the Form Builder, while solving a real event-management requirement of collecting and organizing participant registrations for a technical symposium or workshop.

PROCEDURE:

1.DATA MODEL DESIGN:

Before building the form, the data requirement was analysed and organised into a simple data model, grouping the fields under four logical sections that map to the stages of a participant's registration journey: **Participant Details, Registration Details, Track Selection, and Contact & Organization Information.**

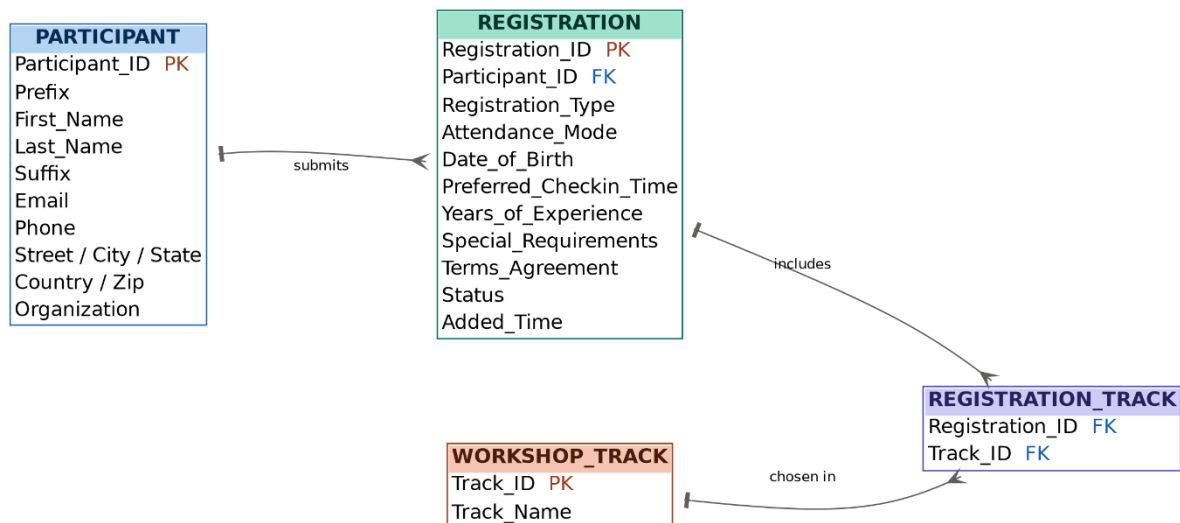

Fig 1. Data Model — Event_Registration_Form and its sectioned fields feeding Event_Registration_Report

2. Application and Form Creation

1. Logged into Zoho Creator and clicked **Create New Application** → **Create from Scratch**.
2. Named the application "**Event Registration & Management System**" and confirmed creation, which opened the default blank workspace.
3. Inside the application, opened the **Forms** panel and clicked the + icon to add a new form, naming it **Event_Registration_Form**.
4. This automatically created a linked report, **Event_Registration_Report**, which will list every submitted registration request.

3. Drag-and-Drop of Basic Fields

In the Form Builder, the Basic Fields palette was expanded on the left panel. Each required field was dragged from the palette and dropped onto the canvas in the order needed, then double-clicked to open its Field Properties panel for renaming and configuration, as listed below.

Basic Field	Form Field Name	Purpose	Sample Value
Name	Participant_Name	Captures the full name of the participant using First/Last name sub-fields	Priya Venkatesan
Email	Email_Address	Captures a validated email address for sending the registration confirmation and event updates	priya.venkatesan@example.com
Address	Institution_Address	Captures the full address of the participant's college or organization	REC Campus, Thandalam, Chennai, TN, 602105
Phone	Contact_Number	Captures a validated mobile number for the organizing committee to reach the participant	+91 96000 77889
Single Line	College_Organization_Name	Captures a short free-text entry for the participant's college or company name	Rajalakshmi Engineering College
Multi Line	Expectations_From_Event	Captures free-text remarks on what the participant hopes to gain from attending	Looking forward to hands-on exposure to agentic automation using UiPath Studio Web.
Number	Team_Size	Captures a numeric value with validation for the number of members in the participant's team	3
Date	Preferred_Session_Date	Captures the date of the specific session/day the participant intends to attend (for multi-day events)	12-Sep-2026
Time	Preferred_Session_Slot	Captures the participant's preferred time slot among parallel sessions	10:00 AM
Drop Down	Event_Track	Presents a single-select list of tracks or sub-events available at the symposium	AI & Data Science Track
Radio	Participant_Type	Captures a single mandatory selection	Student
Multi Select	Areas_Of_Interest	Allows selection of one or more session topics or technical areas of interest	Agentic Automation, Generative AI, Cloud Computing
Checkbox	Agree_To_Code_Of_Conduct	Captures the participant's acknowledgement of the event's rules and code of conduct	Checked (Agreed)

4. Organising Fields into Sections

To keep the form participant-friendly and logically grouped, a Section field was dragged from the Layout palette above each group of related fields, and the dropped fields were dragged again to nest them under the correct section header. Four sections were created in this way:

- **Section A — Participant Details:** Participant_Name, Participant_Type, Team_Size.
- **Section B — Contact Details:** Email_Address, Contact_Number, Institution_Address.
- **Section C — Event & Session Preferences:** College_Organization_Name, Event_Track, Areas_Of_Interest, Expectations_From_Event.
- **Section D — Scheduling & Policy Acknowledgement:** Preferred_Session_Date, Preferred_Session_Slot, Agree_To_Code_Of_Conduct.

Each section header was renamed by double-clicking it and typing the section title, and fields within a section were reordered using drag handles until the layout matched the intended participant journey from identity to policy acknowledgement.

5. Applying Field-Level Validations

1. Selected Participant_Name, Contact_Number, Email_Address, Team_Size, Event_Track, Preferred_Session_Date, and Agree_To_Code_Of_Conduct one by one and enabled the **Mandatory** toggle in Field Properties.
2. Opened Email_Address properties and confirmed the built-in email format validation was active.
3. Opened Contact_Number properties and set the phone format to the Indian country-code pattern.
4. Opened Team_Size properties and set Minimum Value = 1 and Maximum Value = 10.
5. Opened Preferred_Session_Date properties and restricted selectable dates to today and future dates only, disallowing past dates.
6. Confirmed under Agree_To_Code_Of_Conduct that the Submit button remains disabled until the checkbox is checked.

6. Preview and Deployment

1. Clicked the Preview icon in the Form Builder toolbar to view the live participant-facing form and verified that all four sections render in order with correct field types.
2. Filled and submitted three sample registrations through the preview/live form to test validations and generate report data.

3. Opened Event_Registration_Report from the Reports panel and verified that all submitted records appear with values mapped correctly to each field.
4. Applied a filter on Event_Track and Preferred_Session_Date in the report view to confirm the organizing committee can sort upcoming session attendance.

OUTPUT:

The following screenshots capture the completed application: the Form Builder showing all thirteen Basic Fields arranged into four sections, the live participant-facing form preview, and the Event_Registration_Report containing sample submitted records.

The screenshot displays the 'Event Registration Form' application in a development environment. The interface includes a top navigation bar with the application name, a 'Development' status indicator, and links for 'View as', 'Trial expires in 2 days', 'Upgrade', 'Edit this application', and 'Help'. A left sidebar menu shows 'Event Registrations' with a dropdown containing 'Event Registration Form' (selected) and 'All Event Registrations'. The main content area is titled 'Event Registration Form' and contains two sections: 'participant_details' and 'contact & institute_details'. The 'participant_details' section includes fields for 'Participant Type' (set to 'Student'), 'Participant Name' (split into 'First Name' 'SUPRIYA' and 'Last Name' '241401111'), and 'Team Size' (set to '3'). The 'contact & institute_details' section includes fields for 'Email Address' (supriya.tr.2024.csbs@rajalakshmi.edu.in), 'Contact Number' (+91 6383518440), 'College Organization Name' (rajalakshmi engineering college), and 'Institution Address' (REC Campus, Thandalam, Chennai, TN, 602). A large, faint watermark '24' is visible across the bottom half of the image.

participant_details	
Participant Type	Student
Participant Name	SUPRIYA 241401111
First Name	Last Name
Team Size	3

contact & institute_details	
Email Address	supriya.tr.2024.csbs@rajalakshmi.edu.in
Contact Number	+91 6383518440
College Organization Name	rajalakshmi engineering college
Institution Address	REC Campus, Thandalam, Chennai, TN, 602

RESULT

An Event Registration Form application was successfully designed and built in Zoho Creator using all thirteen Basic Fields — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox. The fields were logically grouped into four sections through drag-and-drop, mandatory and format-level validations were configured successfully, and the Event_Registration_Report was verified to correctly capture and list participant registration data submitted through the form. The exercise thus demonstrated an understanding of data modelling and low-code form design for a real business use case
