Exp 7

Integrating a Zoho Creator application with another Zoho service using connections and APIs

Vehicle Service Request Form — Bigin by Zoho CRM Integration Use Case

1. Aim

To integrate a Zoho Creator application with Bigin by Zoho CRM using a microservice connection, a form workflow, and Deluge scripting, so that the details submitted through a Creator form are created automatically as a record in Zoho CRM.

2. Procedure

Phase A: Creating the Bigin by Zoho CRM Connection

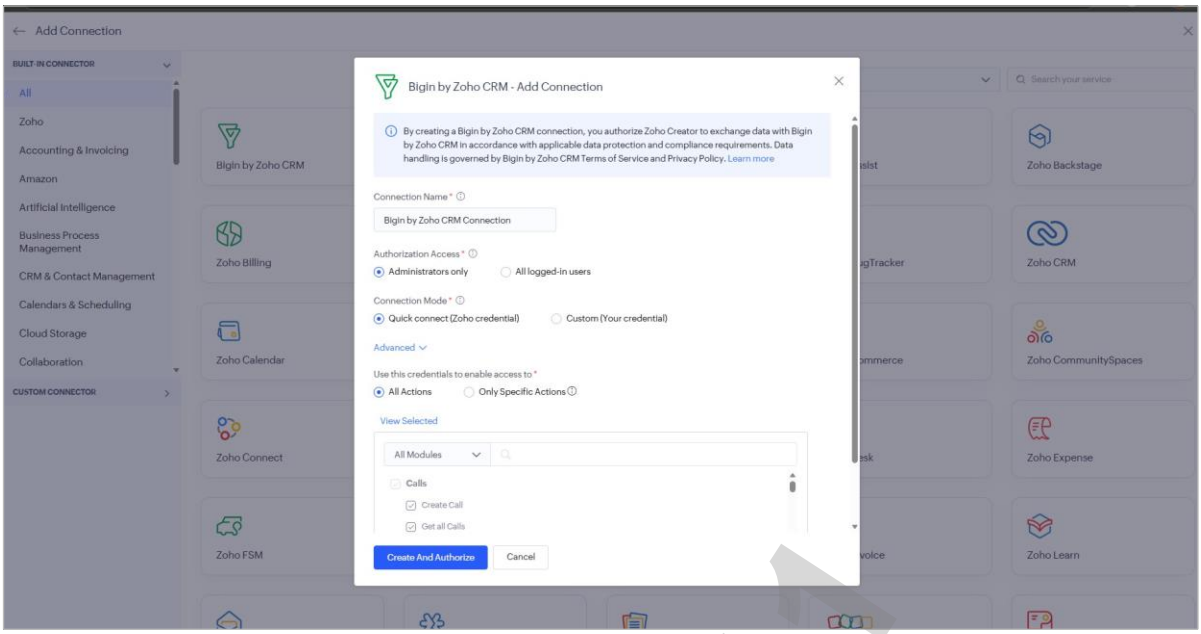

1. Log in to your Zoho Creator developer account and open the Vehicle Service Request Form application.
2. In the left navigation panel under the Develop section, click **Microservices** to access the centralized integration environment.
3. Click **Create New**. The *Create New Microservice* window lists AI Models, AR Library, Connections, Datasources and Custom API. Against **Connections**, click **Pick & Create**.

The Create New Microservice window; the Pick & Create button next to Connections is used to start adding the connection.

4. From the Built-in Connector list, select **Bigin by Zoho CRM**. In the Bigin by Zoho CRM – Add Connection dialog, keep the Connection Name as *Bigin by Zoho CRM Connection*.
5. Set Authorization Access to **Administrators only**, Connection Mode to **Quick connect (Zoho credential)**, and enable access to **All Actions**. Click **Create And Authorize**.

The Bigin by Zoho CRM – Add Connection dialog with Authorization Access set to Administrators only, Connection Mode set to Quick connect (Zoho credential), and access enabled for All Actions, followed by Create And Authorize.

Phase B: Verifying the Connection

6 After authorization, return to Microservices and open the Bigin by Zoho CRM Connection. Confirm that its link name is `bigin_by_zoho_crm_connection` and that the connection shows the green **Enabled** status.

7 Note this link name, as it is the reference used to call the connection from the form workflow script. Use the **Test** button under Test Connection to confirm that it works.

8

The Bigin by Zoho CRM Connection details page (link name bigin_by_zoho_crm_connection) showing the Enabled status, the authorized account, and Connection Access turned On for the Event Registration and My first Creator app applications.

Phase C: Setting Up the Form Workflow

9 Navigate back to the application, select the form that submits the request, and click the **Workflow** tab in the top header.

10 Create a new form workflow that executes on **Created > Successful form submission**.

241401111

11 In the Add New Action panel, set **Run this action** to **Always**, so that every successful submission is sent to Zoho CRM, and choose **Deluge script** from the Action type grid.

Phase D: Compiling the Deluge Script Code

12 In the Deluge editor, initialize a map named `leadInfo` and map the form fields to the Zoho CRM fields: Student_Name1 to Last_Name, Email_Address to Email, Contact_Number to Phone, and Preferred_Course to Description.

13 Call `zoho.crm.v8.createRecord("Leads", leadInfo, Map(), "bigin_by_zoho_crm_connection")` to create the record through the connection link name, and store the result in `response`.

14 Use `info` statements to trace the start of the CRM action and the response returned by Zoho CRM.

15 Click **Save** to run the compiler validation and save the script.

```
info "CRM ACTION STARTED";
leadInfo = Map();
leadInfo.put("Last_Name",input.Student_Name1);
leadInfo.put("Email",input.Email_Address);
leadInfo.put("Phone",input.Contact_Number);
leadInfo.put("Description",input.Preferred_Course);
response = zoho.crm.v8.createRecord("Leads",leadInfo,Map(),"bigin_by_zoho_crm_connection");
info "CRM RESPONSE:";
info response;
```

Deluge script for the form workflow (Created > Successful form submission). It builds the leadInfo map, calls zoho.crm.v8.createRecord for the Leads module using the connection, and traces the response using info.

3. Output & System Verification

The integration between the Creator application and Zoho CRM was set up through a microservice connection and a Deluge workflow. As seen in the Microservices interface, the Bigin by Zoho CRM connection is established and available.

• **Connection Diagnostic Result:** Enabled (green status verified)

• **Operational Availability:** The connection link name `bigin_by_zoho_crm_connection` is available for reference in the form workflow script, and Connection Access is On for the listed applications.

• **Target Module:** Records created by the workflow are added to the Leads module of Zoho CRM.

4. Conclusion

The lab exercise demonstrates how to connect a low-code application to another Zoho service using microservices, form workflows, and custom Deluge scripting. By linking the form submission to the Zoho CRM connection, the Vehicle Service Request Form project establishes a working proof-of-concept in which submitted details are pushed automatically into Zoho CRM.
